

# **Livin' On The (Cheap) Edge**

Christian Köberl – Global Azure Austria, May 2023

# Christian Köberl

 All-end developer and software gardener.

 Chief Technical Architect @ Porsche Informatik.

Develops webapps with Java since 1999.

 You'll find my code at [github.com/derkoe](https://github.com/derkoe)

 More talks and information at [derkoe.dev](https://derkoe.dev)

 I tweet at [@derkoe](https://twitter.com/derkoe)

**Cheap Web Hosting?**

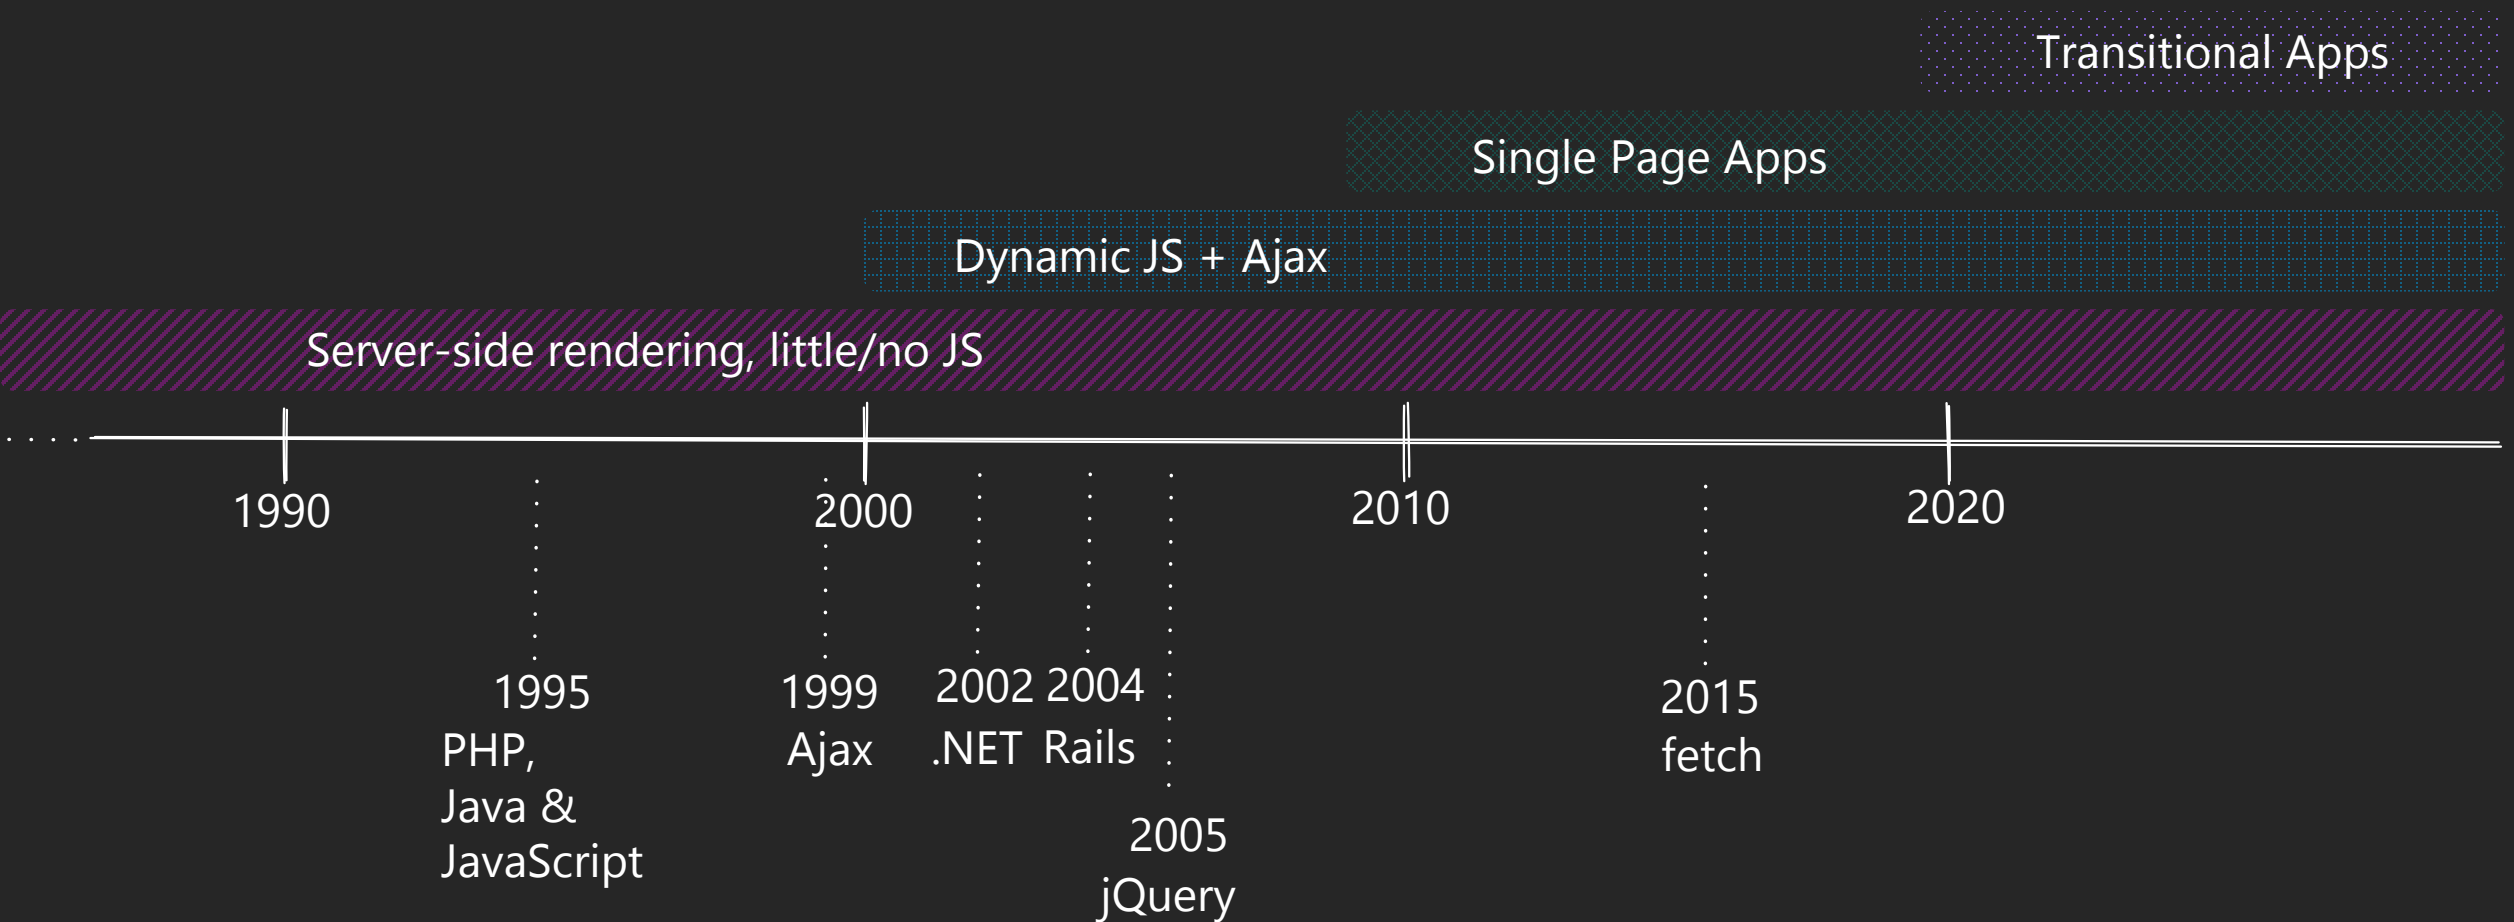

**What happened?**

# What happened?

**Transitional Web  
Applications**

**New (Edge)  
Hosting Platforms**

# Short History of JavaScript Web

# Transitional Web Applications

## HTML first

When done right the site works without JavaScript

Interactivity typically via `<form>` posts

## SSG SSR

Server-side rendering (SSR) or static site generation (SSG)

Switch automatically to single-page application mode (hydration).

## One codebase

Server and client code in one file

(Semi-)automatic code splitting

# Client-Side Rendering (Single Page App)

# Static Site Generation (SSG) Server-Side Rendering (SSR)

# Hydration

# Partial Hydration (Islands)

# “Resumeability” and Lazy Loading

# Frameworks

 **astro**

 **qwik**

**NEXT**.js

 **Nuxt**

 **SOLIDJS**

JavaScript/TypeScript

**Phoenix** Framework

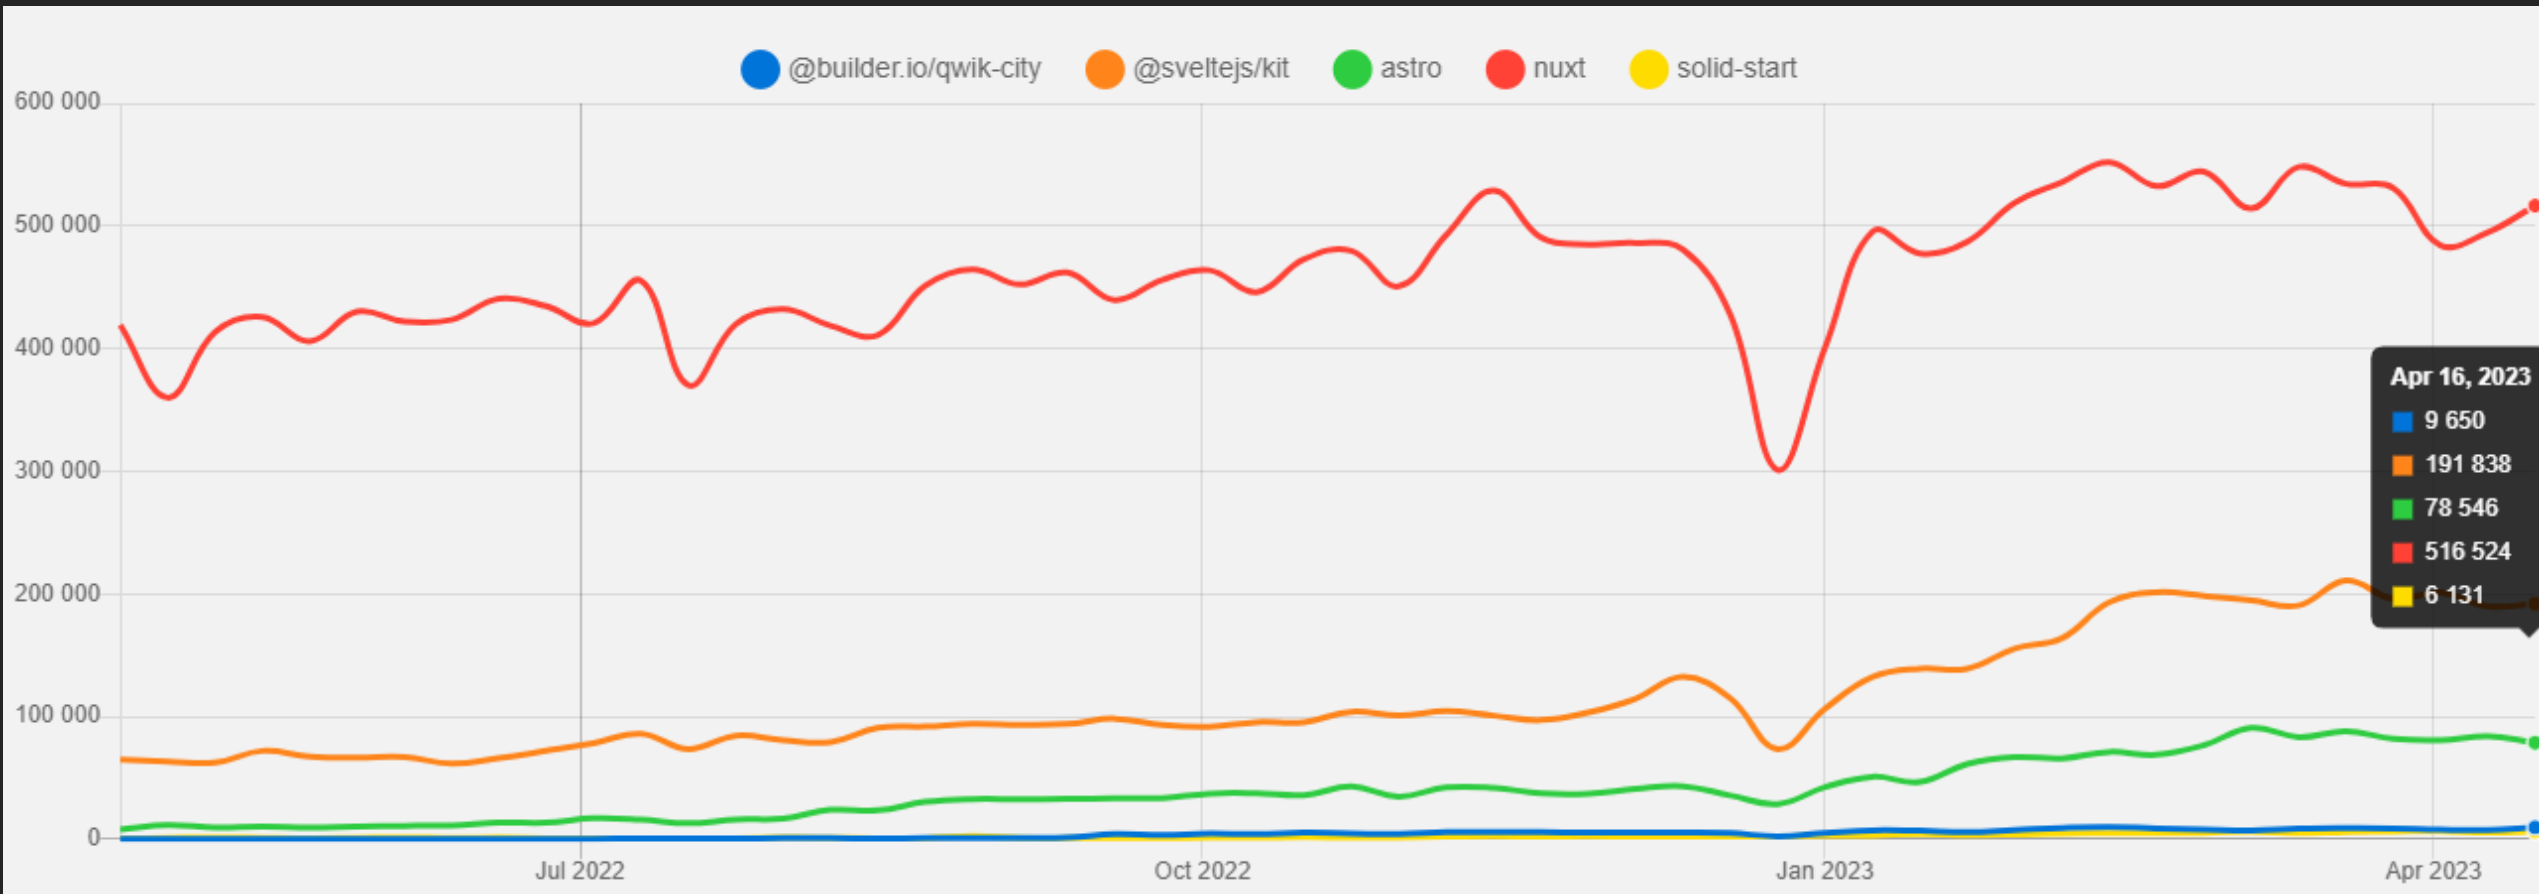

Elixir (Erlang BEAM)

**Leptos**

Rust

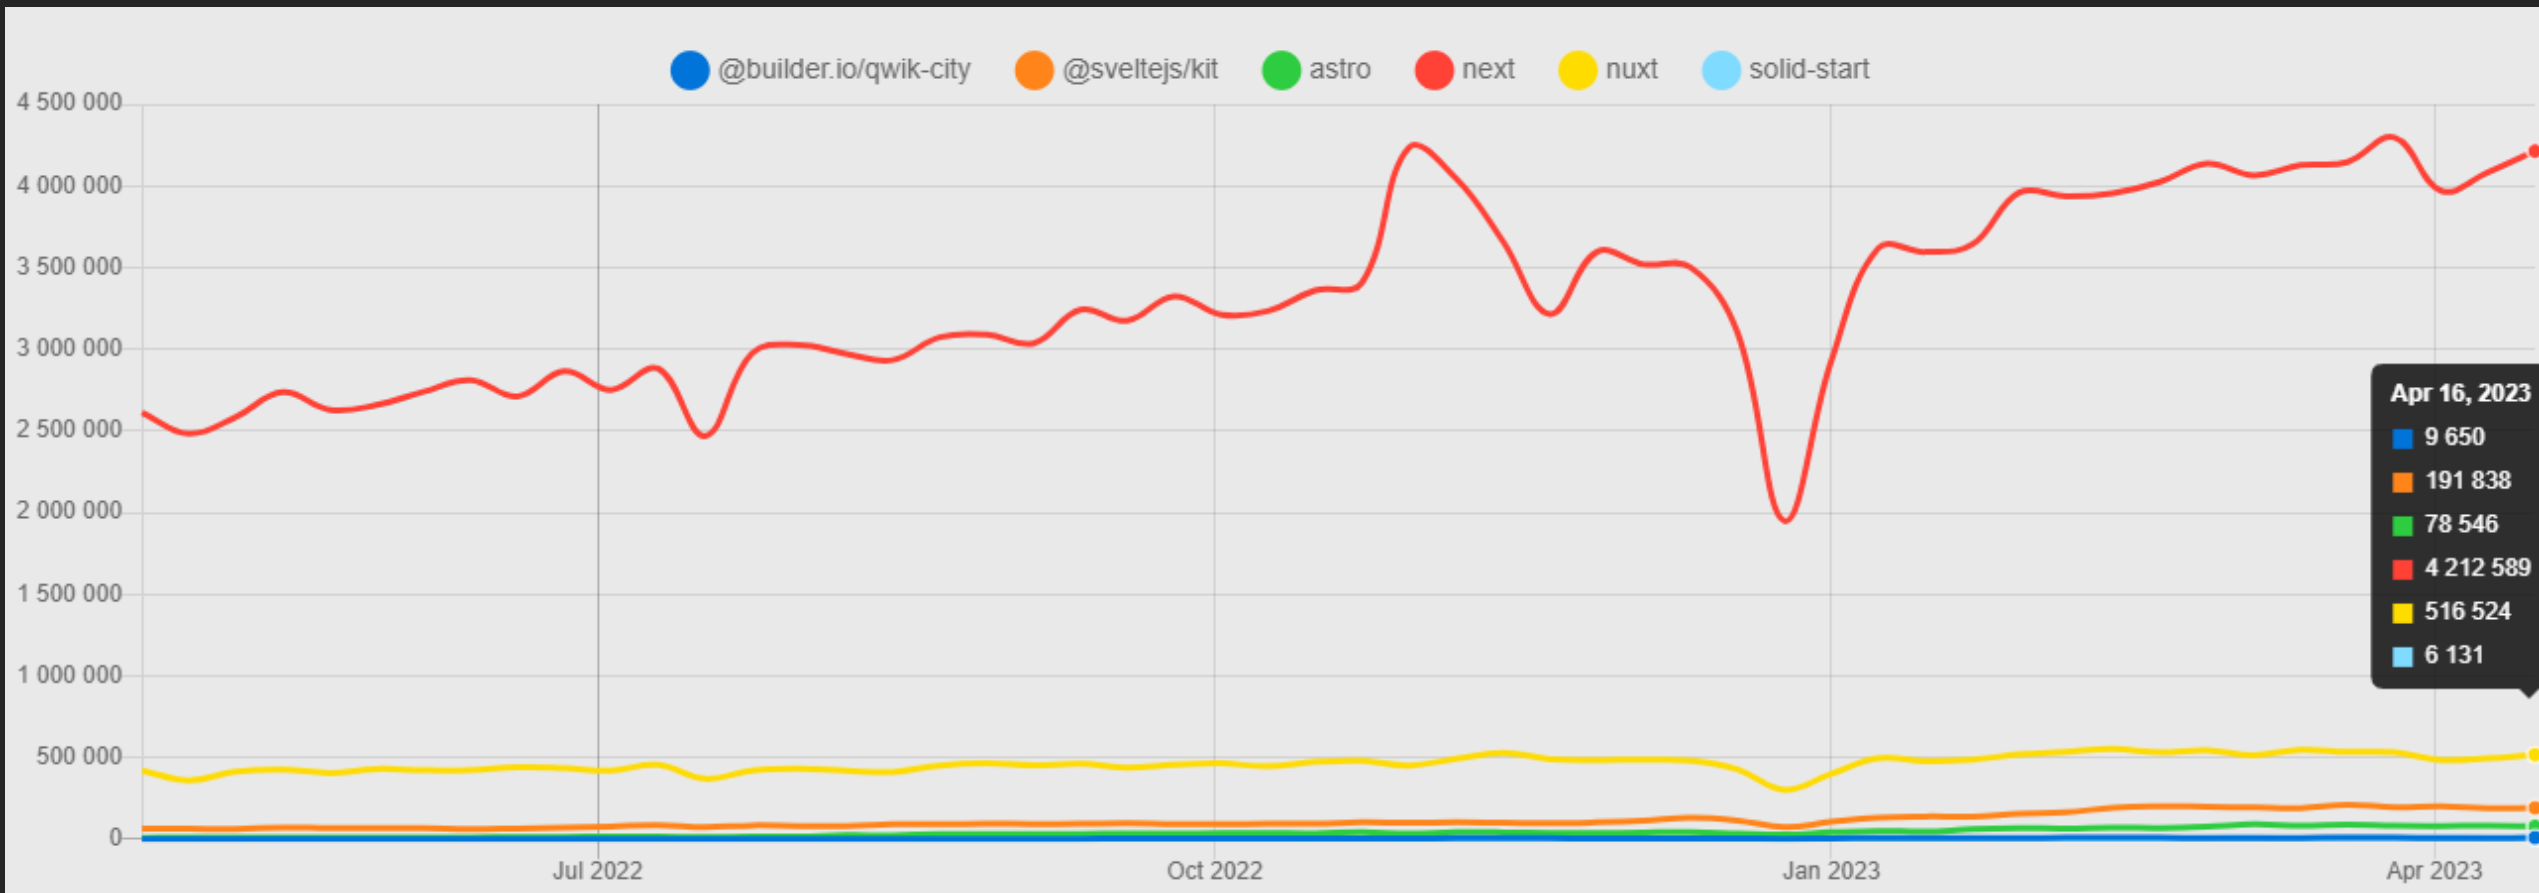

<b>Framework</b>	<b>Features</b>	<b>Rendering</b>
<b><u>Next.js</u></b>	SSR, SSG ISR (incremental static regeneration)	React
<b><u>Nuxt</u></b>	SSR, SSG	Vue
<b><u>SvelteKit</u></b>	SSR, SSG HTML-first Fine-grained reactivity	Svelte
<b><u>Astro</u></b>	SSR, SSG HTML-first Partial hydration (“islands”)	React, Preact, Svelte, Vue, ...
<b><u>Qwik City</u></b>	SSR, SSG HTML-first Fine-grained reactivity “Resumeable”	Qwik (React)
<b><u>SolidStart</u></b>	SSR, SSG HTML-first Fine-grained reactivity	SolidJS

# NPM Trends

# NPM Trends with Next.js

# Demo

## Qwik Todo App

Code: <https://github.com/derkoe/qwik-todos>

# What happened?

**Transitional Web  
Applications**

**New (Edge)  
Hosting Platforms**

# New Hosting Platforms

Function as a Service (FaaS)

**Fly.io**

Edge Containers

**CLOUDFLARE**

Edge Workers

# Runtime Comparison

## Function as a Service

## Edge Functions

### Isolation

MicroVMs or containers

V8 isolates

### Startup time

Average: 2s for Azure, 0.6s for AWS

(Almost) no cold start

### Languages

Any  
(explicit support for JS, Python, Java)

Only JS and WASM

### Limitations

Very few limitations

- No TCP connections
- Small max bundle size
- Small execution time limit

# Hosting Platforms Compared

## Cloudflare Pages

## Azure SWA

### Hosting

Globally distributed (edge)

Static content globally distributed, functions run in defined region

### Authentication

- Possible with "Zero Trust" (💰)
- Only all routes or no auth at all
- SAML, OpenID Connect, well known providers

- Included
- Fine-grained route control
- OpenID Connect, Azure AD, well known providers

### Cold Start

Not recognizable

Adds around 2 seconds to normal request time

### CDN

Cloudflare fully integrated

FrontDoor can be added (💰)

### Limits

Server function < 5MB, 20k files  
200ms startup, 30 seconds execution

500 MB total storage, 15k files

-

# Demo

## Qwik Application on Azure Static Web Apps and Cloudflare Pages

Code: <https://github.com/derkoe/qwik-todos>
